

RS485 LTE Gateway

The RS485 IoT gateway helps send data between devices that are far apart, using either a wired LAN or Wi-Fi. It's great for connecting devices that can't be physically linked. This gateway has LAN and Wi-Fi ports, as well as options for RS232 or RS485 connections. It lets you link devices with Ethernet and serial ports to Wi-Fi networks. It supports various ways of communication like Virtual COM, TCP, UDP, and HTTPS. It also works with Modbus, a common communication protocol. Even though it has just one Ethernet port, it can be used in many different ways.

RS485 LTE Gateway

Operation Temperature	-6 – 60 degree C
Wifi	2.4 GHz Wifi interface
Buffer (Rx/Tx)	Max 16K bytes
Network Protocol	TCP /IP, HTTP, MQTT
Speed Rate	20Mbps
Wifi Certificate	FCC/CE
RS 485	10kb/sec
Input Voltage	6.30V DC
Network Model	STA
Security	WPA – PSK / WPA2 – PSK
Encryption	WEP64/WEP128/TKIP/AES
Work Mode	Transparent transmission, Modbus RTU
Max. Slave	30
Configurable	Web Page
